

Damage alert

RED Extensive destruction across the area

Provisional

Night occupancy

17 million
People in the shaken area

2.0 million
Buildings in the shaken area

153 thousand
Heavily damaged (central estimate)

Share of buildings in the mapped area by expected damage

Provinces most affected: heavily damaged buildings, central estimate and 90% range

How this report was made

Hazard engine	Bumelerze SHAKEmap 0.1.0, ground-motion models CY14, ASB14, BSSA14, KALE15, intensity via Zaniniandhofer19 (IMS-25)
Conditioning	mvn (Engler et al. 2022) on stations+dyfi with reverse-GMICE sigma (UQ-B, D46)
Observations	262 seismic stations, 1665 felt-report cells (felt channel: dyfi)
Distances	finite-fault; rupture: Source: Wald Finite Fault Model (surface trace, FF model, known faults)Event ID: us6000jllzModel created: 2023-02-09 19:17 MST
Risk chain	fragility PGA curves, 200 simulations, night occupancy, exposure from GEM national models
Provenance	config 733656299bf5, product version 6, event us6000jllz

What this is, and what it is not

An automatic estimate of shaking and building damage from the earthquake's location and magnitude, adjusted with whatever station and felt-report data existed at the time. Ranges show the spread of 200 simulations of the shaking field, the building stock mix and the fragility curves. Building counts come from national models, not surveys: a district with an unusual building stock will be wrong in a way the range does not capture. Casualties are not published. Exact figures, grids and provenance: Bumelerze Atlas, <https://peshawa-lh.github.io/bumelerze-atlas/events/us6000jllz/v6/>.
