

IMS-25 intensity

Expected damage grade (IMS-25)

Damage alert

GREEN

Little or no building damage expected

Provisional

Night occupancy

Buildings heavily damaged (DG3 or worse): central estimate and 90% range

2.9 million

People in the shaken area

319 thousand

Buildings in the shaken area

none

Heavily damaged (central estimate)

Building exposure modelled for: Iraq, Turkey. Shaded areas without exposure data are shown for shaking only.

Share of buildings in the mapped area by expected damage

Provinces most affected: heavily damaged buildings, central estimate and 90% range

Dohuk		none
Nineveh (partly inside map)		none
Bitlis		none
Diyarbakir (partly inside map)		none
Hakkari (partly inside map)		none
Mardin (partly inside map)		none
Muş (partly inside map)		none
Siirt		none
Şirnak		none
Van		none

How this report was made

Hazard engine	Bumelerze SHAKEmap 0.1.0, ground-motion models CY14, ASB14, BSSA14, KALE15, intensity via Zaniniandhofer19 (IMS-25)
Conditioning	none (catalog only)
Observations	0 seismic stations, 0 felt-report cells (felt channel: none)
Distances	ps2ff; rupture: point source
Risk chain	fragility IMS-25 rules (Iraq); PGA curves (Turkey), 200 simulations, night occupancy, exposure from GEM national models
Provenance	config fbb027175b60, product version 1, event 20260905_0000239

What this is, and what it is not

An automatic estimate of shaking and building damage from the earthquake's location and magnitude, adjusted with whatever station and felt-report data existed at the time. Ranges show the spread of 200 simulations of the shaking field, the building stock mix and the fragility curves. Building counts come from national models, not surveys: a district with an unusual building stock will be wrong in a way the range does not capture. Casualties are not published. Exact figures, grids and provenance: Bumelerze Atlas, https://peshawa-lh.github.io/bumelerze-atlas/events/20260905_0000239/v1/.
