Shaking intensity (IMS-25)

Expected building damage grade

IMS-25 intensity

Expected damage grade (IMS-25)

Damage alert

**GREEN** Little or no building damage expected

**Provisional** **Day occupancy**

Buildings heavily damaged (DG3 or worse)

## 2 to 24

Central estimate 7. The range is the 5th to 95th percentile.

Buildings in the shaken area

## 197 thousand

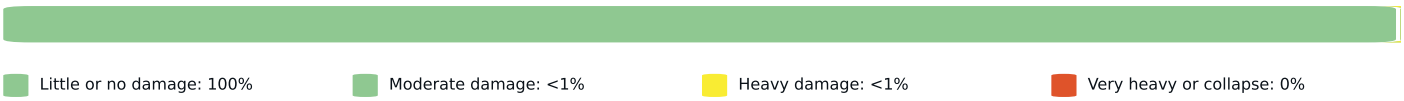

21% of them inferred from built-up area, not observed footprints.

People by shaking level

No population above intensity IV inside the map.

Building exposure modelled for: Iraq. Shaded areas without exposure data are shown for shaking only.

Share of buildings in the mapped area by expected damage

Little or no damage: 100% | Moderate damage: <1% | Heavy damage: <1% | Very heavy or collapse: 0%

## Which buildings failed

Share of each type's own buildings heavily damaged, worst first

| | | | |
|---|---|---|---|
| Manufactured stone with RC floors | class C | **0.0%** | ≈ 3 buildings |
| Manufactured stone units, timber floors | class B | **0.0%** | ≈ 1 buildings |

## Governorates most affected: heavily damaged buildings, central estimate and 90% range

## Cities most affected

## Every governorate inside the map

| Area | Buildings | Heavy (P50) | 90% range | % of its stock |
|---|---|---|---|---|
| Hawler | 121 thousand | 3 | 1 to 15 | 0.00% |
| Slemani | 76 thousand | 2 | 1 to 9 | 0.00% |
| Ninewa | 540 | none | none to none | 0% |

## How this report was made

**Hazard engine** Bumelerze SHAKEmap 26.2.0, ground-motion models CY14, ASB14, BSSA14, KALE15, intensity via Zaniniandhofer19 (IMS-25)

**Observations** 0 seismic stations, 0 felt-report cells (felt channel: none)

**Damage scale** IMS-25

### Data sources

Built from USGS, EMSC and GEOFON earthquake parameters; building footprints from GFZ OpenBuildingMap (c) OpenStreetMap contributors, ODbL, and Microsoft, CDLA-Permissive-2.0; JRC Global Human Settlement Layer and WorldPop, CC BY 4.0; OCHA COD-AB Iraq, CC BY-IGO; GEM Global Exposure Model; IMS-25 vulnerability table. Full records, with licences and checksums: github.com/Peshawa-LH/bumelerze-engine

### What this is, and what it is not

An automatic estimate of shaking and building damage from the earthquake's location and magnitude, adjusted with whatever station and felt-report data existed at the time.
