Shaking intensity (IMS-25)

Expected building damage grade

IMS-25 intensity

Expected damage grade (IMS-25)

Damage alert

GREEN Little or no building damage expected

Provisional **Day occupancy**

Buildings heavily damaged (DG3 or worse)

none to 3

Central estimate 1. The range is the 5th to 95th percentile.

Buildings in the shaken area

18 thousand

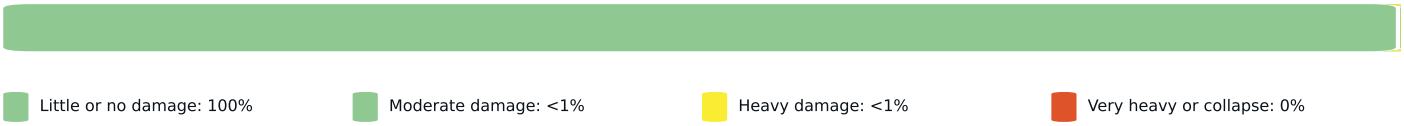

21% of them inferred from built-up area, not observed footprints.

People by shaking level

No population above intensity IV inside the map.

Building exposure modelled for: Iraq. Shaded areas without exposure data are shown for shaking only.

Share of buildings in the mapped area by expected damage

Which buildings failed

Share of each type's own buildings heavily damaged, worst first

No building type reached heavy damage.

Governorates most affected: heavily damaged buildings, central estimate and 90% range

Every governorate inside the map

Area	Buildings	Heavy (P50)	90% range	% of its stock
Maysan	11 thousand	none	none to 2	0%
Wassit	6.9 thousand	none	none to 1	0%

How this report was made

Hazard engine Bumelerze SHAKEmap 26.2.1, ground-motion models CY14, ASB14, BSSA14, KALE15, intensity via Zaniniandhofer19 (IMS-25)

Observations 0 seismic stations, 0 felt-report cells (felt channel: none)

Damage scale IMS-25

Data sources

Built from USGS, EMSC and GEOFON earthquake parameters; building footprints from GFZ OpenBuildingMap (c) OpenStreetMap contributors, ODbL, and Microsoft, CDLA-Permissive-2.0; JRC Global Human Settlement Layer and WorldPop, CC BY 4.0; OCHA COD-AB Iraq, CC BY-IGO; GEM Global Exposure Model; IMS-25 vulnerability table. Full records, with licences and checksums: github.com/Peshawa-LH/bumelerze-engine

What this is, and what it is not

An automatic estimate of shaking and building damage from the earthquake's location and magnitude, adjusted with whatever station and felt-report data existed at the time.
