

Damage alert

YELLOW

Some buildings damaged, mostly repairable

Provisional

Day occupancy

Buildings heavily damaged (DG3 or worse): central estimate and 90% range

14 million

People in the shaken area

3.5 million

Buildings in the shaken area

950

Heavily damaged (central estimate)

Building exposure modelled for: Iraq, Turkey. Shaded areas without exposure data are shown for shaking only.

Share of buildings in the mapped area by expected damage

Provinces most affected: heavily damaged buildings, central estimate and 90% range

How this report was made

Hazard engine	Bumelerze SHAKEmap 0.1.0, ground-motion models CY14, ASB14, BSSA14, KALE15, intensity via Zaniniandhofer19 (IMS-25)
Conditioning	none (catalog only)
Observations	0 seismic stations, 0 felt-report cells (felt channel: none)
Distances	ps2ff; rupture: Origin
Risk chain	fragility IMS-25 rules, 200 simulations, day occupancy, exposure from GEM national models
Provenance	config fbb027175b60, product version 5, event iscgem839648

What this is, and what it is not

An automatic estimate of shaking and building damage from the earthquake's location and magnitude, adjusted with whatever station and felt-report data existed at the time. Ranges show the spread of 200 simulations of the shaking field, the building stock mix and the fragility curves. Building counts come from national models, not surveys: a district with an unusual building stock will be wrong in a way the range does not capture. Casualties are not published. Exact figures, grids and provenance: Bumelerze Atlas, <https://peshawa-lh.github.io/bumelerze-atlas/events/iscgem839648/v5/>.
