

Damage alert

RED

Extensive destruction across the area

Provisional

Transit occupancy

33 million

People in the shaken area

7.8 million

Buildings in the shaken area

75 thousand

Heavily damaged (central estimate)

Share of buildings in the mapped area by expected damage

Governorates most affected: heavily damaged buildings, central estimate and 90% range

Cities most affected

How this report was made

Hazard engine	Bumelerze SHAKEmap 2.1.0, ground-motion models CY14, ASB14, BSSA14, KALE15, intensity via Zaniniandhofer19 (IMS-25)
Conditioning	mvn (Engler et al. 2022) on dyfi with reverse-GMICE sigma (UQ-B, D46)
Observations	0 seismic stations, 1131 felt-report cells (felt channel: dyfi)
Distances	finite-fault; rupture: Hayes, personal communication
Risk chain	fragility macroseismic model on IMS-25 intensity (Giovinazzi and Lagomarsino 2004), 200 simulations, transit occupancy, exposure from the Bumelerze Iraq building database
Provenance	config 09a6a04fa72f, product version 2, event us2000bmcg

What this is, and what it is not

An automatic estimate of shaking and building damage from the earthquake's location and magnitude, adjusted with whatever station and felt-report data existed at the time. Ranges show the spread of 200 simulations of the shaking field, the building stock mix and the fragility curves. Building types come from priors trained on two city surveys, not from a survey of every building: a district with an unusual building stock will be wrong in a way the range does not capture. Casualties are not published. Exact figures, grids and provenance: Bumelerze Atlas, <https://peshawa-lh.github.io/bumelerze-atlas/events/us2000bmcg/v2/>.
