Shaking intensity (IMS-25)

Expected building damage grade

IMS-25 intensity

Expected damage grade (IMS-25)

Damage alert

GREEN Little or no building damage expected

Provisional **Transit occupancy**

Buildings heavily damaged (DG3 or worse)

2 to 36

Central estimate 8. The range is the 5th to 95th percentile.

Buildings in the shaken area

157 thousand

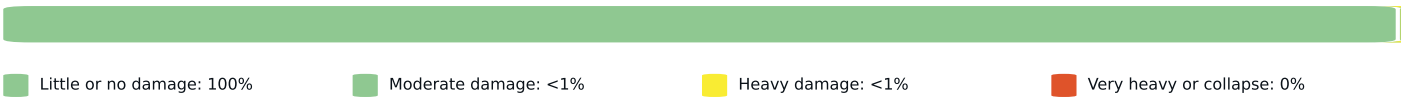

21% of them inferred from built-up area, not observed footprints.

People by shaking level

No population above intensity IV inside the map.

Building exposure modelled for: Iraq. Shaded areas without exposure data are shown for shaking only.

Share of buildings in the mapped area by expected damage

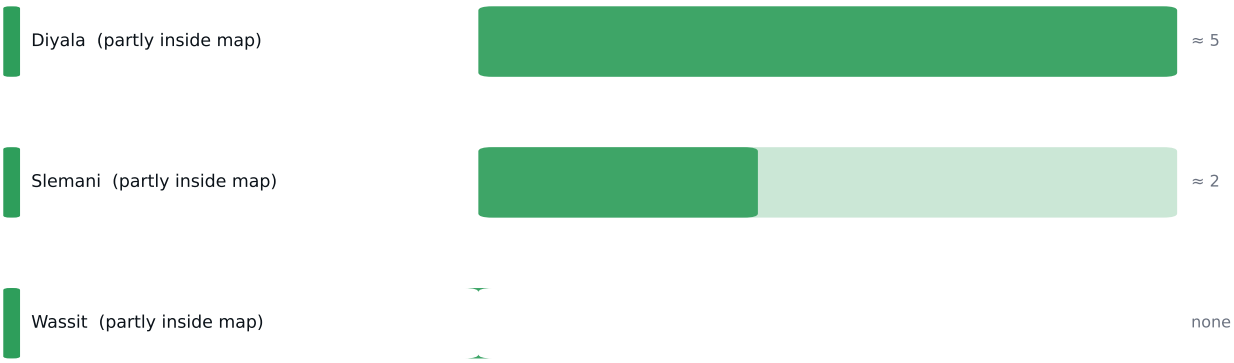

Little or no damage: 100% | Moderate damage: <1% | Heavy damage: <1% | Very heavy or collapse: 0%

Which buildings failed

Share of each type's own buildings heavily damaged, worst first

Rubble stone, fieldstone	class A	**0.0%**	≈ 1 buildings
Manufactured stone units, timber floors	class B	**0.0%**	≈ 1 buildings
Simple stone	class B	**0.0%**	≈ 1 buildings
Adobe, earth brick	class A	**0.0%**	≈ 1 buildings
Manufactured stone with RC floors	class C	**0.0%**	≈ 2 buildings

Governorates most affected: heavily damaged buildings, central estimate and 90% range

Cities most affected

Every governorate inside the map

Area	Buildings	Heavy (P50)	90% range	% of its stock
Diyala	84 thousand	5	2 to 25	0.01%
Slemani	72 thousand	2	1 to 11	0.00%
Wassit	970	none	none to none	0%

How this report was made

Hazard engine Bumelerze SHAKEmap 26.2.0, ground-motion models CY14, ASB14, BSSA14, KALE15, intensity via Zaniniandhofer19 (IMS-25)

Observations 0 seismic stations, 0 felt-report cells (felt channel: none)

Damage scale IMS-25

Data sources

Built from USGS, EMSC and GEOFON earthquake parameters; building footprints from GFZ OpenBuildingMap (c) OpenStreetMap contributors, ODbL, and Microsoft, CDLA-Permissive-2.0; JRC Global Human Settlement Layer and WorldPop, CC BY 4.0; OCHA COD-AB Iraq, CC BY-IGO; GEM Global Exposure Model; IMS-25 vulnerability table. Full records, with licences and checksums: github.com/Peshawa-LH/bumelerze-engine

What this is, and what it is not

An automatic estimate of shaking and building damage from the earthquake's location and magnitude, adjusted with whatever station and felt-report data existed at the time.
